

SAFETY TRAINING KIOSK

The Safety Training Kiosk, known as STK, helps you implement a comprehensive safety training approach. It ensures that all individuals receive training tailored to their level of risk exposure, focusing on reducing overall risks effectively.

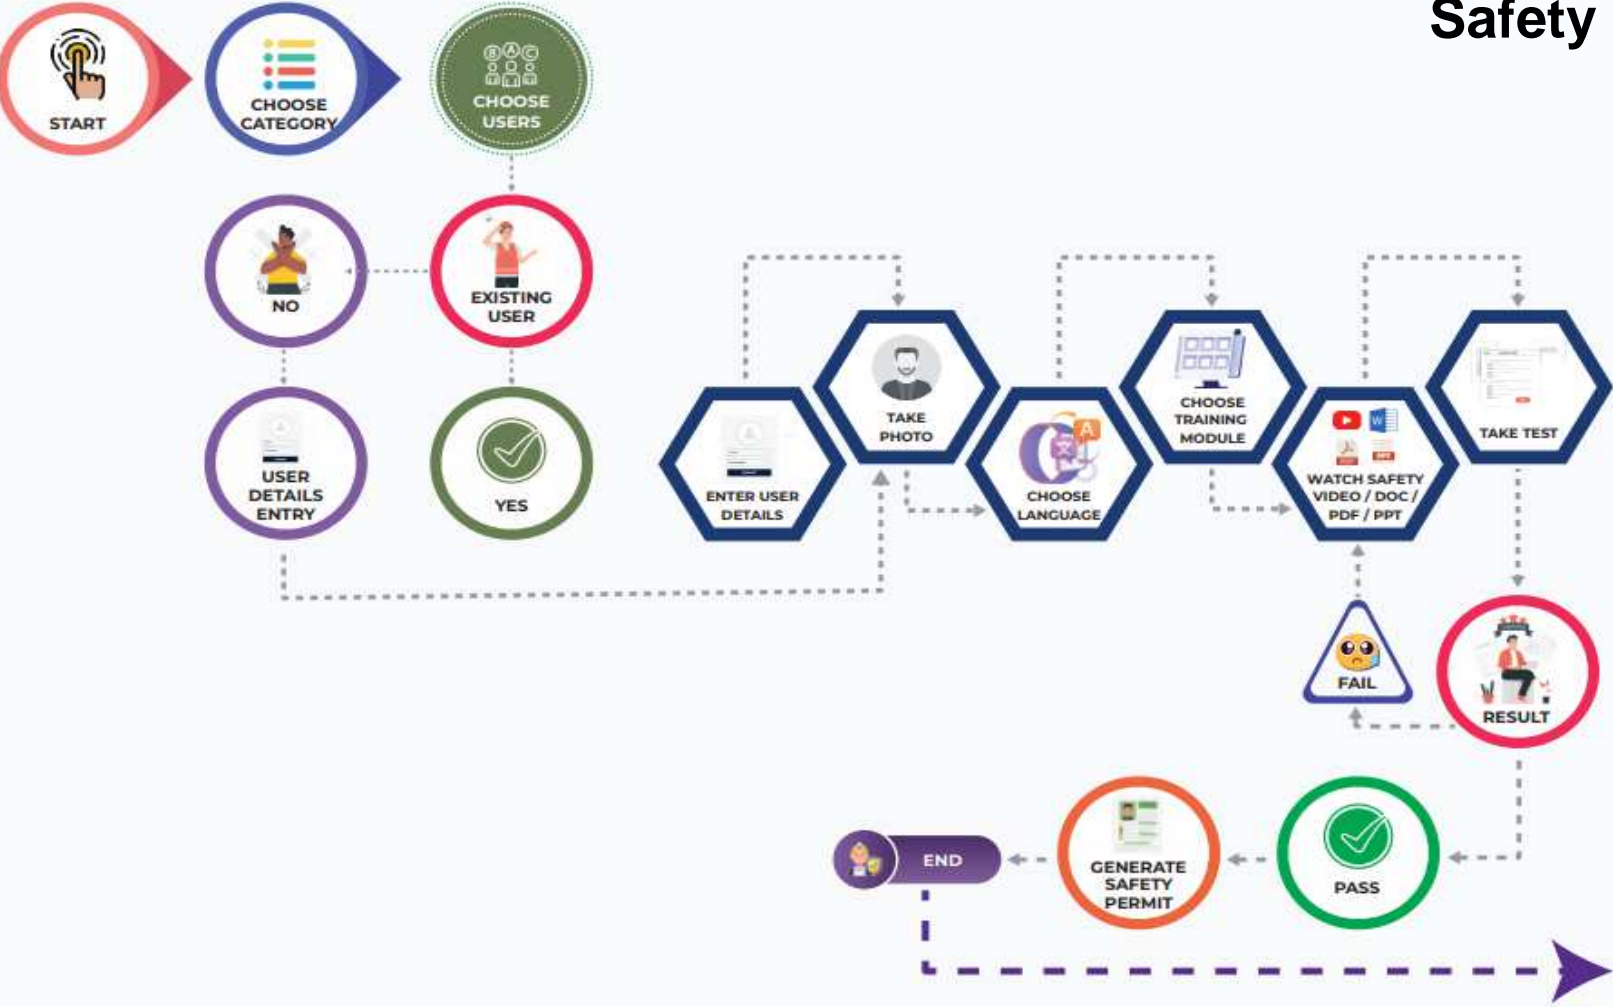

Introduction

The Safety Training Kiosk (STK) was developed to modernize safety training practices and has significantly transformed the safety training process. An interactive kiosk equipped with a touchscreen automates the delivery of safety instructions to workers, guests, drivers, and contractors.

STK offers distinct advantages for businesses and their personnel. It enables businesses to create training modules, manage programs, and access comprehensive analytics and data.

Using self-registration and a guided process by STK, users can access training and obtain safety permits for entry into the organization. They receive clear instructions on registration, language selection, viewing instructions, and taking assessments. After completing a series of safety training videos, users are required to pass a short quiz. Upon successful completion, STK generates a personalized safety permit for the user.
